Conflicting Answers

Before You Travel

Preparation that stays connected to its evidence

Transparency & Accountability
El-Moatasem Mohamed Madani

Uncertainty before a public-office visit

An adult preparing a first Kenyan passport needs to know what to bring and which instructions apply.

A saved checklist can also become outdated.

Pilot scope: adult Kenyan citizen by birth. Office applicability needs confirmation.
Local user research and measured reductions in repeat visits are still pending.

OBSERVED EVIDENCE

Different terms need clarification

SOURCE A

Directorate of Immigration Services

2 payment invoices

Checked: 2026-09-19 · Effective: not stated

Curated for an adult citizen by birth. Confirm local office applicability.

[Open original source ↗](#)

SOURCE B

eCitizen Immigration passport page

three application receipts

Checked: 2026-09-19 · Effective: not stated

Broader application page, scoped by the prototype curator. Currency and local applicability remain unconfirmed.

[Open original source ↗](#)

Two official pages use different counts and document terms.
Check dates: 19 September 2026. Effective dates remain unknown.

Preparation beside unresolved questions

BEFORE YOU TRAVEL

Your preparation plan

Partial checklist from compared statements. Confirm the full requirements with the institution.

2 / 2 matching steps prepared

✓

Original birth certificate plus a copy.

Review this draft. Nothing is sent automatically.

Hello Directorate of Immigration Services,

I am checking first-passport preparation for an adult Kenyan citizen by birth. Your requirements page mentions two payment invoices; the eCitizen page mentions three application receipts. Do these refer to the same document? Which documents and quantities apply now, and is there a current official notice confirming this? Please also confirm applicability to my intended office.

Actual app screen. The checklist covers matching statements only.
A clarification draft includes both original source links.

THE DISTINCTION

A changed requirement reopens its step

Unchanged preparation stays checked.

Changed requirements reopen with an explanation.

New items start unchecked. Removed items remain visible.

A new check date alone does not erase completed work.

The browser compares requirement evidence on reload or reconnect.

No background monitoring or automatic institutional response is claimed.

Two receipt copies become three

What changed in your plan?

1 item(s) to review

Changed steps reopen for review. Unchanged progress stays checked.

Payment documents · Changed

Before: Two copies of the fictional receipt.

Now: Three copies of the fictional receipt.

Review the wording, evidence and applicability. Changed or new steps are unchecked until you prepare them again.

▼ Try a fictional requirement update

A separate training example shows how one changed requirement reopens. Official evidence and your saved plan stay separate.

Start fictional demo

Apply fictional update

Exit demo

FICTIONAL UPDATE: receipt copies changed from two to three. Only that step reopened. Unchanged ticks remain.

Clearly fictional example using the same reconciliation logic.
One step reopens. Real source data and saved preparation remain separate.

Evidence remains open to inspection

Source identity, scope and dates remain visible.
Different terms and missing statements stay unresolved.
Users can copy a precise question to the institution.
The application never sends it automatically.

Agreement does not establish complete requirements or current institutional practice.

A dated plan that reopens offline

Explicit save, plain-text download and printing.
English and visibly labeled draft Swahili.
No account or identity-document upload.
Preparation progress stays on the device.

First access needs a browser and internet. Independent translation and accessibility review remain pending. Clearing app data does not delete downloads or browser history.

Testable decisions in a small codebase

Codex assisted implementation, debugging and test design.
Python compares curated source statements.
A shared JavaScript module tracks requirement changes.
Flask serves the UI and API, with PostgreSQL support.

No runtime LLM or AI truth verdict. Source curation remains a review responsibility.
Render configuration and Neon deployment instructions accompany the code.

VALIDATION

Selective changes and offline use work

14 Python tests passed.

14 JavaScript preparation tests passed.

Browser checks exercised real offline reopening,
selective changes, fixture isolation and mobile layout.

Local checks only. Hosted CI, live deployment, institutional acceptance and community impact must be verified separately.

Local catalogs can reuse the workflow

Next pilot: measure clarity and time to find the right source.
Observe whether users notice a changed preparation step.
Expand through locally reviewed services and languages.
Assign a content owner for source updates.

No adoption, savings or repeat-visit reduction is claimed.
Egypt and Arabic are possible extensions, not current product coverage.

NEXT STEPS

A focused pilot with accountable review

Validate the journey with intended users.
Resolve source ambiguity with the institution.
Review the translation and verify the hosted deployment.

Origin disclosure: AI assisted concept brainstorming. The brief restricts AI-generated ideas, so organizer eligibility clarification is needed before submission.
